Allowable Subject Matter

1. Claims 1 and 3-7 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The prior arts of record do not anticipate or render obvious to one skilled in the art a display system comprising various elements as claimed, more specifically a first substrate having a plurality of pixel electrodes, wherein for each of the pixel electrodes, a first pixel electrode surface has a first distance relative to the common electrode and a second distance relative to a surface of the first substrate and a second pixel electrode surface has a third distance relative to the common electrode and a fourth distance relative to the surface of the first substrate, and wherein the first distance is not equal to the third distance and the second distance is not equal to the fourth distance and wherein the first pixel electrode surface and the second pixel electrode surfaces are flat and reflective and a dielectric layer disposed above the first pixel electrode surface and not above the second pixel electrode surface.
4. The closest reference USPAT 6,433,848, USPAT 5,461,501, USPAT 6,195,140 and USPAT 6,563,559 discloses the claimed relationships between the distances of the first electrode surface and the common electrode as well as the first substrate and the second electrode surface and the common electrode as well as the first substrate. However, all of the references alone or in combination fail to teach or suggest the claimed dielectric layer being disposed above the first reflective pixel electrode surface and not above the second reflective pixel electrode surface.
